

Spartacus Ant

The Nature of Money

The Director of the Bank of England, Sir Josiah Stamp AD1927

'The modern banking system manufactures money out of nothing. The process is perhaps the most astonishing piece of sleight of hand that was ever invented... bankers own the earth. Take it away from them but leave them the power to create money, and, with a stroke of a pen, they will create enough money to buy it back again...but if you want to continue to be the slaves of the bankers and pay the cost of your own slavery, then let bankers continue to create money and control credit.'

Who Loans the Capital?

The child's question 'who loans the capital for our loans when the world is drowning in debt?' is a question which destroys the foundations for our financial world. This question reveals that banks do not loan pre-existing capital, they loan bank credit created by monetising their customer's assets.

The bankers keep this monetary system a secret as they know these banking operations will drive their customers into rage. After all, only a Shakespearean idiot will pay compound interest upon money created from nothing! The banks instead promote the collective belief that the banks loan pre-existing capital, even though this deception is a crime against the laws for fiduciary duty.

The banks also neglect to tell their customers that a national monetary supply created as debts bearing compound interest is Satanism and a crime against the heart of humanity as debt is the money for slaves. The bankers do not tell the people that their monetary system has been designed for usury and vampirism, a monetary system which releases the four financial demons of debt, interest, taxation and inflation, a monetary system which will steal their lives with debts created from nothing!

Bank Credit Creation

When a customer applies for a bank loan the banks require the customer to provide collateral as security. The banks then perform a deception associated with double-entry bookkeeping, a deception where, metaphorically, the bankers place their customer's collateral before a banking mirror and record the reflection within the mirror as 'bank capital'.

This capital can now be deposited into the customer's account within the form of a loan which bears compound interest, with a \$1 loan at 6% annual compound interest, calculated daily, over 550 years creating a debt of 214 trillion dollars!

We can note, within this banking system, that the customer's assets create both the appearance of the bank capital and the transfer of funds which form the loan. Astonishingly then, our nation's monetary supply is created using customer assets and a mirror, within a monetary system which has remained almost unchanged since the middle ages, a time for slavery, debt peonage and empire!

The Photographers' Plates

The bankers' mirror is similar to the photographic plates used by the early photographers, plates upon which the images for the real world are reversed and the light areas darkened. The bankers' monetary plates used for bookkeeping also reverse the polarity for our world, creating a Satanic image where the assets of the world are converted into debts owed to the bankers, an image where the empire of the Dark Sun seizes the Sacred Light, an image where natural abundance is turned into a bankers' prison for hunger and usury.

The bankers' photographic plates appear to be credible as they mirror the real world of natural assets. The plates then derive their power in the same way that a counterfeit coin has value when it appears beside an authentic coin.

The bankers enforce the dark illusions of credibility surrounding their images of debt by using their media companies, their political structures and their educational systems to convince the people that they must allow the private bankers to retain ownership of the monetary supply and the 214 trillion dollars interest burden imposed upon a \$1 loan. The bankers are blowing 'hallucinogenic' smoke into the faces of the people, seeking to overwhelm the people's natural intelligence as they convince the nation that 'these are the laws for money and there is no other way.'

The bankers send out their Judas sheep, the politicians, to announce that 'our nation has no money so we must go to the international debt markets to borrow capital', the Judas sheep who announce 'our budget is fully funded by the taxation streams imposed upon the people', the Judas sheep who say 'money must be rare to be valuable' and 'interest streams must be imposed to attract rare capital.'

The people are now corralled, their destiny sealed. The bankers have seized the light of the world and the treasures of the interest streams, the life blood of the people, the labours of their bodies and souls. The bankers can now use their debt bonds to feed upon the assets of the world, creating an inexhaustible hunger which will devour, with debt, even the 'stones' of the earth!

The Moment of Power

This creation of bank capital as a reflection within a mirror, or as etchings upon a photographer's plate, creates one of the most powerful moments in human history, the moment where the ownership of our world is determined by the recording of bank capital as either assets or debts. This moment is so powerful that two of the greatest questions from history have been 'who shall create the monetary supply?' and 'who shall derive the benefits from the streams of interest?'

The rise and fall of empires and their endless wars have been written around the ownership of the 214 trillion dollar debt, a claim of ownership which has driven the sociopaths within humanity insane with greed. The seizing of the interest streams for our world is the financial 'ring of power' desired by the banking Gollum's, it is the ownership question which has torn humanity loose from the Sacred until humanity is transformed into sacrificial sheep grazing within the fields surrounding the bankers' temples for usury, grazing beneath the mocking signs 'Work will set you Free!'

Bank Capital within a Mirror

Let us look at some of the possibilities which surround the creation of bank capital within a financial mirror.

Firstly, the bank capital can be recorded as an asset to a private bank and loaned as a debt to the customer, with the private bank seizing the interest stream of 214 trillion dollars. This is our current monetary system.

Secondly, the same debt based monetary system can be used but the ancient laws against usury are imposed so the accrued interest cannot exceed the original loan. This reduces the customer debt from 214 trillion dollars to \$2, owed to the private bank.

Thirdly, since the customer's assets create the loan then the loan could be recorded as an asset to the customer, with a \$1 loan at 0% annual compound interest, calculated daily, over 550 years creating a debt of \$1, owed to the private bank.

Fourthly, the debt based monetary system is used to create a 214 trillion dollar debt but the bank credit is created by a nationally owned public bank so the 214 trillion dollars is returned to the nation for the 'good of all.'

Fifthly, the loan is recorded as an asset by a nationally owned public bank to create a loan bearing 0% interest and the accrued debt over 550 years of \$1 is owed to the nation's bank.

Debt Loans, Asset Loans

We can suspect that when the customers discover that their debt loans have been created from nothing, the customers will rebel and demand the reverse-engineering of their loans, with the loans now created as customer assets bearing 0% interest so the interest payments, plus penalties, are returned to the customers.

The customers could also demand that their loans be erased as this banking system has been designed as malevolent usury and a violation of the laws for fiduciary duty, fraud, odious debt, pyramid schemes, racketeering and contracts. The customers may demand then that all their loan payments, including interest and penalties, must be returned to the customers.

The Satanic Forgetfulness

We can see that when we say 'we should leave the nature for monetary creation to the debt bankers' then almost certainly we will be paying 214 trillion dollars upon a \$1 loan! We can also see that if we are apathetic or disinterested in the nature of money, then we will also be paying 214 trillion dollars and we will be working for 15 out of every 20 years of our working lives simply to pay the price for our own slavery, simply to feed the four demons of debt, interest, taxation and inflation.

The thread of Satanism then which runs through our world is our forgetfulness surrounding the nature of money, a forgetfulness which inexorably leads us to the insane creation of our monetary supply as debts bearing compound interest. This monetary forgetfulness is the thread which aligns our entire world into distorted and violent images for usury, a dark realm where even our banknotes, our symbol for natural trade between two people, have taken the form of debt instruments designed for Satanism.

Bankers and the Law

We can imagine a scene where the bankers are finally dragged into a court of law and forced to confess to their crimes for fraud and usury.

Firstly, the bankers confess they create money from nothing and impose compound interest upon their creation.

Secondly, the bankers confess they perform crimes against the laws for fiduciary duty when they claim they loan pre-existing capital.

Thirdly, the bankers confess their customers do not need to pay compound interest upon loans created from nothing as the customers' assets create the reflection the banks call 'bank capital'.

Fourthly, the bankers confess our banking system is a structure for usury and Satanism.

Fifthly, the bankers confess their loans should be deemed void as they are created by a criminal enterprise, a pyramid structure based upon fraud.

Sixthly, the bankers confess our nation could reverse-engineer the process of loan creation so loans are recorded as assets to the customers and loaned interest free.

And finally, the bankers confess the recording of customer loans as assets to the customers is a moral and authentic method for the creation of interest free loans.

Monetary Choice

We have a choice for our monetary system, we can use an asset based system or a debt based system. We can choose whether a \$1 loan over 550 years become a debt of \$1, \$2, or 214 trillion dollars. We can choose whether the interest streams are seized by the private bankers or returned to the nation for the 'good of all'.

We can choose to impose a financial Jubilee, a cancellation of all customer and banking debts, an action which recapitalises the banks so they are free to continue with loan creation using customer collateral.

We can choose to re-engineer our national and individual loans, converting customer debts into customer assets, with the interest and penalties returned to the customer. We could perhaps name this financial revolution the 'Spartacus' solution in honour of the slaves who revolted against the tyrannies imposed by ancient Rome!

Beyond the Mirror

Are we condemned forever to rely upon a banking mirror to create our monetary supply as either assets or debts? Are these the 'laws for money and there is no other way?' Are we condemned to never have a permanent monetary supply, condemned to rely upon a debt banker to create a loan for us or we starve? Surely there must be someone who can design a monetary system where a debt mirror is as redundant as a medieval oil lamp when we need to light our world?

There are millions of engineers and mathematicians alive today so perhaps there is someone who can design a monetary system which satisfies Aristotle's requirements for authentic money, to be portable, durable, divisible, easily recognisable and intrinsically valuable. There must be someone who can fulfil the economist's dream for a monetary system which is 100% reserve and operates using the minimal technological costs, those of debt, interest, taxation and inflation.

Antonomics

Let us return to the child who asked 'who supplies the capital for our loans when the world is drowning in debt?' for this child has a second question, 'do ant colonies ever collapse through debt?'

Ants have existed for at least 120 million years and ants run complex economies, yet the concept of debt has never entered the mind of an ant. What then is the secret for ants and economics, the secret we can call 'Antonomics'.

Ants power their colonies using ant life force, a power given freely from the cosmos. We too could define money as human life force traded within a marketplace, or more precisely 'I will go to the sea for a fish if you go to the hills for fruits and tonight we will feast'.

Ants base their colonies upon ant-hours of labour to organise nest building, road building and food gathering. We too could define monetary work as 'the distance a typical human being, walking at the normal speed of 5km/hr, will cover within one hour, that is 5000 metres'. This is a measure for human physiology, human psyche, time, distance and the speed of light as a metre is a measure for the speed of light within a vacuum.

Ants combine their work potential to energise their entire colony with productive work. We too could calculate the potential labours for the people, projected ahead for the next year, to create an asset lake within the heart of our nation, a lake which can be released through the turbine of monetary policy to power our nation debt free.

Antonomics allows us to issue each person within our nation with a universal basic income of perhaps 20 work hours per week, a basic income to seed our lives, our relationships and our business ventures.

Antonomics gives us a monetary system which is controlled and owned by our nation so a \$1 loan at 0% annual compound interest, calculated daily, over 550 years creates a debt of only \$1 and the people now own 20 out of every 20 years of their working lives.

Antonomics is beyond the capitalist and communist divide as it is perfectly feasible for private businesses to operate using an asset based monetary system. Indeed, this is perhaps the only way that our businesses can survive without being destroyed by the financial crimes surrounding racketeering.

Antonomics fulfils Aristotle's requirements for authentic money, to be portable, durable, divisible, easily recognisable and intrinsically valuable.

Antonomics fulfils the economists' dream for a monetary system which is 100% reserve and operates using the minimal technological costs, those of debt, interest, taxation and inflation.

Antonomics allows us to monetise all the realms for our economy which are presently unpaid, such as the 'commons', the beating heart of our nation which includes the carers, the students, the artists and the children.

Antonomics removes a 'thousand dark flowers' for usury, dark flowers which continually poison our world with hunger, greed and war.

Antonomics moves us beyond debt and mirror reflections, moves us from a monetary level of medieval oil lamps to hydro power and electricity.

Antonomics shows us the path to financial freedom and natural abundance.

Antonomics shows us a cosmic maxim 'To change the world, change the monetary supply!'

Antonomics could demonstrate these financial principles through the creation of an international marketplace based upon Cyclos banking software.

Antonomics could also be an insurance policy for the inevitable collapse of the debt bankers' monetary system, the financial disaster which will arise when the bankers' debt mirror shatters into a billion pieces!

Welcome then to Antonomics!

Conclusion

Perhaps it is time for the 'Spartacus' solution to our monetary problems, perhaps it is time for the people to organise themselves into a powerful force which can transform our world into the Sacred, perhaps it is time we had a bonfire for the photographic plates of usury!

We now have this power within our hands, we have the knowledge, we have the internet, we have the software, we have the large databases for like-minded people and we have the full power of our systems for Law and natural Justice.

We are free to walk from the debtors' prisons from history into the light radiating from an asset based monetary system. We simply need to ask the questions which resonate with financial power.

What is money? What is its measure? Who shall create the monetary supply? Who shall receive the benefits from the streams of interest? Shall we create our monetary supply as an asset or as a debt? Who supplies the capital for our loans when the world is drowning in debt? If our monetary supply is created from nothing then can we loan this money as an interest free asset? Who owns our debts and our souls? If our banknotes are casino chips then who owns the casino? Is it a fraud against the laws for Fiduciary Duty for bankers to claim they loan pre-existing capital? Is our banking system a crime scene? Why don't we use the ancient laws which forbade the accrued interest from exceeding the original loan? Could our loans be re-engineered from debts to assets? Could our loans be erased under the laws for racketeering, pyramid schemes, odious debt and contracts? Could we impose a Jubilee to clear our historical debts? Could we create a Debt Commission to investigate our debts so we can separate the original loan from the accrued interest? Do we wish to continue with a monetary system based upon debts bearing compound interest, one of the definitions for Satanism? Do we wish to continue with a monetary system which is based upon the passing of our debts onto the young, a definition for pedophilia? Will we continue to be defined as Satanists and pedophiles?

To empower ourselves during this financial process, we need to simply remember the child's question 'do ant colonies ever collapse through debt?', the child's question which can ignite an incandescence within the human heart!

Mackenzie King, Canadian Prime Minister AD1935-1948.

"Once a nation parts with the control of its currency and credit, it matters not who makes the nation's laws. ... Until the control of the issue of currency and credit is restored to government and recognised as its most sacred responsibility, all talk of the sovereignty of parliament and of democracy is idle and futile."
